### PROBABILITY (COIN/DIE)

Probability is a measure of chance.

Chance is the possible outcome of an event to occur/happen.

Sample space is the total number of possible outcomes.

Probability =  $\frac{n(\text{chance})}{N(\text{sample space})}$

OR  $\frac{\text{Desired chance}}{\text{Total chances}}$

### **Examples**

1. When you toss a coin, what is the probability that a head will show up?  
Sample space = {head (H), Tail (T)}

$$\begin{aligned}\text{Probability} &= \frac{n(\text{chance})}{n(\text{sample space})} \\ &= \frac{n(H)}{n(S)} \\ &= \frac{1}{2}\end{aligned}$$

The face with the court of arms is the head and the other face is the tail (T)

## COMBINED OPERATIONS OF NUMBER

Question consisting of 2 or more operations i.e addition (A), subtraction (S),

Multiplication (M), Division (D), of (O) and brackets are worked out using the following order:

First	<b>B</b> rackets	(B)
Second	<b>O</b> f	(O)
Third	<b>D</b> ivision	(D)
Fourth	<b>M</b> ultiplication	(M)
Fifth	<b>A</b> ddition	(A)
Sixth	<b>S</b> ubtraction	(S)

The order of operation forms the word BODMAS which is followed when working out mixed operations.

$$= \frac{12}{3}$$

$$= 4$$

- Work out the average of 6, 10, 4 and 10

$$\text{AV} = \frac{\text{Sum}}{\text{No. of items}}$$

$$= \frac{(6+10)+(4+10)}{4}$$

## NON-DECIMAL SYSTEM

Decimal system means grouping numbers in tens.

- Non - Decimal system means grouping numbers in other groups which are not tens.
- Grouping numbers in twos is base two system of counting also called Binary.
  - Grouping in fives is base five system of counting called quinary, etc.

### SUMMARY TABLE

Twos	Two	Binary	0, 1
Threes	Three	Trinary	0, 1, 2
Fours	Fours	Quaternary	0, 1, 2, 3
Fives	Fives	Quinary	0, 1, 2, 3, 4,
Sixes	Six	Senary	0, 1, 2, 3, 4, 5,
Sevens	Seven	Septenary/ heptanary	0, 1, 2, 3, 4, 5, 6
Eights	Eight	Octal	0, 1, 2, 3, 4, 5, 6, 7
Nines	Nine	Nonary	0, 1, 2, 3, 4, 5, 6, 7, 8
Tens	Ten	Decimal	0, 1, 2, 3, 4, 5, 6, 7, 8, 9

We do not use a digit equal or greater than base itself.

In any system of counting we consider the number of groups of groups made and then objects left.

1. ||||| In base ten means 7 ones

2. ||||| In base five =  |||

## Lesson 11

Sub topic: **Angles and rotation**

Content: definition

Angles is the amount of turning, rotation or opening

Rotation (clockwise or anticlockwise turn through  $360^\circ$ )

Turn clockwise / anticlockwise more through a given angle

Pupils will find the angles that make up turns, half a turn, and a quarter of a turn.

Revolution (a complete turn throughout  $360^\circ$ )

New MK pg 191

Old MK pg 247

## Lesson 13

Sub topic: **The clockwise and anticlockwise turns**

Content: pupils will find the angles made when one turn clockwise and anticlockwise from the given direction

Clockwise turn

anticlockwise turn

## Lesson 14

Sub topic: **Types of angles**

Content: pupils will be guided to name the different types of angles and give examples of such angles

Acute angle, right angle, obtuse angle, straight angle, reflex angle

Acute angle

$$0^\circ < A < 90^\circ$$

obtuse angles

$$90^\circ < c < 180^\circ$$

right angle

$$< 90^\circ$$

reflex angle

$$180^\circ < d < 360^\circ$$

Straight angles

### Example

Name the types of angles written below

a)  $45^\circ$

Acute angle

b)  $200^\circ$

reflex angle

### **Lesson 16**

Sub topic: Drawing angles using a protractor

Content: pupils will draw different angles using a protractor, pencil e.g. using a protractor to draw an angle of  $90^\circ$ .

### **Lesson 17**

Sub topic: **Supplementary angles and complementary angles**

Example: what is the supplement of  $45^\circ$

Let the sup $\angle$  be m

$$M + 45^\circ = 180^\circ$$

$$M + 45 - 45 = 180 - 45$$

$$M + 0 = 135^\circ$$

$$\underline{M = 135^\circ}$$

Complementary angles

Examples: find the complement of  $40^\circ$

Let the comp  $\angle$  be Y

$$Y + 40 = 90$$

$$Y + 40 - 40 = 90 - 40$$

$$Y + 0 = 50$$

$$\underline{Y = 50^\circ}$$

Ref

New MK pg 200

Old Mk pg 240

**Lesson 18**Sub topic: **Application of complementary and supplementary angles**Content: find complement of  $30^\circ$ 

Let the complement be N

$$N + 30 = 90$$

$$N + 30 - 30 = 90 - 30$$

$$N + 0 = 60^\circ$$

$$\underline{N = 60^\circ}$$

The complement of x is  $50^\circ$ . Find the value of x

$$X + 50 = 90$$

$$X + 50 - 50 = 90 - 50$$

$$X + 0 = 40$$

$$\underline{X = 40^\circ}$$

The supplement of an angle is  $72^\circ$ . What is the angle

let the angle be x

$$X + 72 = 180$$

$$X + 72 - 72 = 180 - 72$$

$$X + 0 = 108$$

$$\underline{X = 108^\circ}$$

$$a + 30 + 90 = 180$$

$$a + 120 = 180$$

$$a + 120 - 120 = 180 - 120$$

$$a + 0 = 60$$

$$\underline{a = 60^\circ}$$
